

## Web based ERP for Small Company Management

### DESCRIPTION:

This is web -based ERP software for small to medium sized business management and operation. This software provides a new affordable way to manage and organize your company's business flow, and uncovers new business opportunities based on your real business data. It is a Office 365 Access based business management software. With 1% cost of regular ERP software, NO expensive and heavy server software need on client site, only a browser , it empowers you with a modern business tool to run you business more efficiently and profitably.

The key features for this web-based Sales Database Management include:

- An front page ERP dashboard interfacing into all your business operations.
- A handy bulletin board to highlight business activities across all business operations such as projects, customers, open issues.
- The project management module helps you generate your current projects list, with a project name, project owner's name, customer name, project status and scheduling information. For each project, you can drill through to a project detail form to see records of project detail: working hours, expenses, payment received, project BOM cost material management and total budget balance information.
- Project BOM module allows you to manage your BOM list., and generate the MRP reports.
- Company and Financial management module shows your company financial statements overview and it comes with the financial balance sheet, income statement, expenses report and employee wage report and company fixed assets management information.
- Human resource management module helps you generate your employee list record, with general information, tax information, medical information, and wage features. Also it can help you to manage your employee's resume and other documents information too.
- CRM module comes with a very intuitive but handy CRM features. It helps you manage all your customers information, associated projects, and contact address to customer's database. It also generates a customer phone book and address book for you where you can easily access your customer information.

- Material requirement planning and vendors management module, manages project BOM materials, requirement planning and material vendors contact information
- Company fixed assets management module helps you manage your current assets, with assets purchase value, current value, location, current owner and expire date information. This way you can easily see the status of your fixed assets and their total value.
- Vendor management module helps you manage all your suppliers and vendors contact information.
- Also the company information database helps you record all your company information. It can also manage your company legal documents and other documents with the attached file feature.
- A business analysis features helps you manage your project opportunities, employee times, income vs expenses and many more.. All functions are accessible from a single simple form screen where you can accomplish various sales operations using our intuitive and elegant user interfaces. With little investment you not only get our web-based database templates but also Access 2010 source code. This way you can customize our web based ERP management software further as your business grows. Business managers can also use custom filters, tagged searches and custom database arrangement to further customize and enhance the existing functionalities.

Compared with other ERP software, our software is very flexible and easy to use with an affordable price. It can be further enhanced to support more features and records by anyone with a basic knowledge of Access.

#### BENEFITS:

- Let the database engine behind Access. And the client does all the work.
- Web-based front end minimizes the installation issues, users need only a browser. The database doesn't care whether the user is sending requests via a Windows PC, a Mac or a machine running Linux
- Easy cross platform usage
- Simple security. Only the Web server's administrator has access to the database file.
- No version control problems and real portable. There is no need to install and run heavy-duty server side database on your laptop (client)

- Allow multiple users' access. Web interfaces are unbound. Once a page is loaded, the interface is no longer connected to the database. But a bound Access front end maintains a connection to the source, and Jet limits you to 255 concurrent connections.
- Save time by using a pre-designed template for your business management.
- Save money by spending your time on how to run your business instead designing business software.
- Avoid buying other expensive ERP tools or hire outside consulting to manage your business.
- No learning curve, If you know how to use Access, you know how to use our software.

**SYSTEM REQUIREMENTS:**

- Only need Microsoft Office Access 2010 in one the Web server's administrator (server end) and all other client computers ONLY need Windows, Mac or Linux OS and internet browser.
- Need to have Microsoft Office 365 or a Access hosting service for publish to Access Service.

**SCREENSHOTS:**

The screenshot displays the 'Small Business ERP Database Software' interface. At the top, it shows the title and a URL: <http://www.businessdbuilder.com/>. Below this is a form for 'Open Issues' with fields for Project Name (IIC Project), Project Issues (Need to update the project specifications), Customer's Company Name (IIC Inc), and Contact Name (Tom). To the right are buttons for 'Add new Project', 'Add new Employee', 'Add new Customer', and 'Add new Assets'. Below the form is a table with columns: In Progress Project, Customers List, Employees List, Assets List, Vendors List, Company and Financial, and Material requirement list. The table contains three rows of project data. Below the table is a navigation menu with tabs for 'In Progress Project', 'Customers List', 'Employees List', 'Assets List', 'Vendors List', 'Company and Financial', and 'Material requirement list'. The 'Employees List' tab is selected, showing an 'Employees Information Form' with a 'Save' button. The form has tabs for 'General Information', 'Wages and Tax', 'Health and Emergency', and 'Project work on'. The 'General Information' tab is active, showing fields for ID (1), Employee Name (John), E-mail Address, Job Title (Sr. Engineer), Business Phone, Home Phone, Mobile Phone, Address, City, State, Postal Code, Country, and Gender.
